

UV Coating

You must compete for the attention of your readers.
Let Panaprint help!

Now you can add richness, brilliance, and protection to your printing better than any other method.

Make your product stand out with Panaprint's high gloss ultraviolet coating. UV Coating is a clear liquid spread over the paper like ink and then cured instantly with ultraviolet light. This coating yields a tough, scratch resistant surface that is quite durable.

Put an aqueous or varnished piece next to a UV coated piece, and see the amazing difference!

Panaprint's UV coating:

- Adds resistance to scratching, abrasion, and mailing abuse.
- Helps your piece resist moisture and stains.
- Is ideal for brochures, inserts, perfect bound covers, and more.
- Is applied in-line at web press speed or off-line for sheetfed products.
- Web press products are coated on one side only.
- Sheetfed products can be coated on both sides.
- Gives your piece a "wow factor" that captures the attention of your audience.
- Is environmentally friendly. Since it is cured with UV light and not heat, no chemicals are emitted into the atmosphere.

At Panaprint, we strive to provide the highest quality products and services at the best price. Let us make printing one less thing you have to worry about.

Relax! Panaprint is all you need!

Ask your Panaprint sales representative for more information and pricing.

You'll be surprised what a great value it is!
